FRANCAIS	ENGLISH
<p>Rolled, extruded, drawn or forged products, not in coils, full and constant cross-section over their entire length is in the shape of circle, oval, square, rectangle, equilateral triangle or regular convex polygon (including <i>flattened circles</i> and <i>modified rectangles</i>, two opposite sides of which are the shape of convex circular arc, the other two being straight, equal and parallel). Products with a square, rectangular, triangular or polygonal cross-section can have rounded corners along their entire length. The thickness of products with a rectangular cross-section (including products with a <i>modified rectangular</i> cross-section) exceeds one tenth of the width. Products of the same shape and dimensions, obtained by molding, casting or sintering, are also considered as such when they have been worked after production to a degree greater than rough trimming, provided that such working does not have the effect of conferring on these products the character articles or works reproduced elsewhere.</p> <p>Unwrought copper of heading 74.03 includes wire rod and billets of Chapter 74 which have been pointed or otherwise worked at their ends, simply to facilitate their introduction into the machines intended to transform them into wire rod or tubes. This provision applies <i>mutatis mutandis</i> to products of Chapter 81.</p> <p>b) Profiles</p> <p>rolled, extruded, drawn, forged or formed products, coiled or not, of constant cross-section over their entire length, which do not correspond to any of the definitions of bars, wires, tables, strips, sheets, tubes or pipes. Products of the same shape, obtained by molding, casting or sintering, are also considered as such, when they have received subsequent working beyond rough trimming, provided that this working does not have the effect of conferring on these products the character articles or works included elsewhere.</p> <p>c) Wires</p>	<p>(a) Bars and rods</p> <p>Rolled, extruded, drawn or forged products, not in coils, which have a uniform solid cross-section along their whole length in the shape circles, ovals, rectangles (including squares), equilateral triangles or regular convex polygons (including "flattened circles" and "modified rectangles", of which two opposite sides are convex arcs, the other two sides being straight, of equal length and parallel). Products with a rectangular (including square), triangular or polygonal cross-section may have corners rounded along their whole length. The thickness of such products which have a rectangular (including "modified rectangular") cross-section exceeds one-tenth of the width. The expression also covers cast or sintered products, of the same forms and dimensions, which have been subsequently worked after production (otherwise than by simple trimming or de-scaling), provided that they have not thereby assumed the character of articles or products of other headings.</p> <p>Wire-bars and billets of Chapter 74 with their ends tapered or otherwise worked simply to facilitate their entry into machines for converting them into, for example, drawing stock (wire-rod) or tubes, are however to be taken to be unwrought copper of heading 74.03. This provision applies <i>mutatis mutandis</i> to the products of Chapter 81.</p> <p>(b) Profiles</p> <p>Rolled, extruded, drawn, forged or formed products, coiled or not, of a uniform cross-section along their whole length, which do not conform to any of the definitions of bars, rods, wire, plates, sheets, strip, foil, tubes or pipes. The expression also covers cast or sintered products, of the same forms, which have been subsequently worked after production (otherwise than by simple trimming or de-scaling), provided that they have not thereby assumed the character of articles or products of other headings.</p> <p>(c) Wire</p> <p>Rolled, extruded or drawn products, in coils, which have a uniform solid cross-section along their whole length in the shape of circles, ovals, rectangles (including squares), equilateral triangles or regular</p>

FRANCAIS	ENGLISH
<p>rolled, extruded, or coiled products with a solid and constant cross-section over their entire length in the shape of a circle, oval, square, rectangle, equilateral triangle or regular convex polygon (including <i>flattened circles</i> and <i>modified rectangles</i>, two opposite sides of which are in the shape of a convex circular arc, the other two being straight, equal and parallel). Products with a square, rectangular, triangular or polygonal cross-section can have rounded corners along their entire length. The thickness rectangular cross-section products (including <i>modified rectangular</i> cross-section products) exceeds one tenth of the width.</p> <p>d) Sheet, strip and foil</p> <p>flat products (other than unwrought products), whether or not rolled, of rectangular cross-section, whether or not with rounded corners (including <i>modified rectangles</i>, two opposite sides of which are convex arcs, the other two being straight, equal and parallel) of constant thickness, presented :</p> <ul style="list-style-type: none"> - square or rectangular no thicker than one-tenth the width; - in forms other than square or rectangular, of any size, provided they do not have the character of articles or works included elsewhere. <p>The headings referring to sheet, strip and foil cover, in particular, sheet, strip and foil with patterns (e.g. grooves, ridges, embossing, tears, buttons, rhombes) as well as those that are perforated, corrugated, polished or coated, provided that such working does not have the effect of conferring on the products of the kind the character of articles or articles included elsewhere.</p> <p>e) Tubes and pipes</p>	<p>convex polygons (including "flattened circles" and "modified rectangles", of which two opposite sides are convex arcs, the other two sides being straight, of equal length and parallel). Products with a rectangular (including square), triangular or polygonal cross-section may have corners rounded along their whole length. The thickness of such products which have a rectangular (including "modified rectangular") cross-section exceeds one-tenth of the width.</p> <p>(d) Plates, sheets, strip and foil</p> <p>Flat-surfaced products (other than the unwrought products of heading 80.01), coiled or not, of solid rectangular (other than square) cross-section with or without rounded corners (including "modified rectangles" of which two opposite sides are convex arcs, the other two sides being straight, of equal length and parallel) of a uniform thickness, which are :</p> <ul style="list-style-type: none"> - of rectangular (including square) shape with a thickness not exceeding one-tenth of the width; - of a shape other than rectangular or square, of any size, provided that they do not assume the character of articles or products of other headings. <p>Headings for plates, sheets, strip, and foil apply, <i>inter alia</i>, to plates, sheets, strip, and foil with patterns (for example, grooves, ribs, chequers, tears, buttons, lozenges) and to such products which have been perforated, corrugated, polished or coated, provided that they do not thereby assume the character of articles or products of other headings.</p> <p>(e) Tubes and pipes</p> <p>Hollow products, coiled or not, which have a uniform cross-section with only one enclosed void along their whole length in the shape of circles, ovals, rectangles (including squares), equilateral triangles or regular convex polygons, and which have a uniform wall thickness.</p> <p>Products with a rectangular (including square), equilateral triangular</p>

FRANCAIS	ENGLISH
<p>hollow products, coiled or not, whose cross-section, which is constant over their entire length and has only one closed hollow, is in the shape of a circle, oval, square, rectangle, equilateral triangle or regular convex polygon, and whose walls have a constant thickness. Tubes and pipes also include products with a square, rectangular, equilateral triangular or regular convex polygonal cross-section, which may have rounded corners along their entire length, provided that the inner and outer cross-sections have the same shape, arrangement and center. Tubes and pipes with the above cross-sections may be polished, coated, bent, threaded, tapped, drilled, swaged, flared, tapered or fitted with flanges, collars or rings".</p>	<p>or regular convex polygonal cross-section, which may have corners rounded along their whole length, are also to be considered as tubes and pipes provided the inner and outer cross-sections are concentric and have the same form and orientation. Tubes and pipes of the foregoing cross-sections may be polished, coated, bent, threaded, drilled, waisted, expanded, cone-shaped or fitted with flanges, collars or rings."</p>

The display screens of flat-panel display modules can be flat, curved, flexible, foldable or extensible. Flat-panel display modules can incorporate additional elements, including those needed to receive video signals and to distribute these signals in pixels on the screen. However, heading 85.24 does not cover display modules which incorporate components for converting video signals (example, a scaler IC, a decoder IC or an application processor) or which have taken on the character of goods of other positions.</p> <p>For the purposes of classifying flat-panel display as defined in this Note, heading 85.24 takes precedence over any other heading in the Nomenclature.</p> <p>Current Notes 6 to 8 become Notes 8 to 10, respectively.</p>	<p><u>New Note 7.</u></p> <p>Insert the following new Note 7 :</p> <p>"7.- For the purposes of heading 85.24, "flat panel display modules" refer to devices or apparatus for the display of information, equipped at a minimum with a display screen, which are designed to be incorporated into articles of other headings prior to use. Display screens for flat panel display modules include, but are not limited to, those which are flat, curved, flexible, foldable or stretchable in form. Flat panel display modules may incorporate additional elements, including those necessary for receiving video signals and the allocation of those signals to pixels on the display. However, heading 85.24 does not include display modules which are equipped with components for converting video signals (e.g., a scaler IC, decoder IC or application processor) or have otherwise assumed the character of goods of other headings.</p> <p>For the classification of flat panel display modules defined in this Note, heading 85.24 shall take precedence over any other heading in the Nomenclature."</p> <p>Re-number present Notes 6 to 8 as Notes 8 to 10, respectively.</p>

FRANCAIS	ENGLISH
<p><u>New Note 11.</u></p> <p>Insert the following new Note 11:</p> <p>"11.- For the purposes of heading 85.39, the expression <i>light-emitting diode (LED) light sources</i> covers :</p> <p>a) <i>Light-emitting diode (LED) modules</i>, which are electrical light sources based on light-emitting diodes (LEDs), arranged in electrical circuits and comprising electrical, mechanical, thermal or optical elements. They also contain discrete active or passive elements or items of heading 85.36 or 85.42 for purpose of supplying power or controlling power. <i>Light-emitting diode (LED) modules</i> do not have a base designed to be easily installed or replaced in a luminaire and to allow electrical contact and mechanical fastening.</p> <p>b) <i>Light-emitting diode (LED) lamps and tubes</i>, which are electrical light sources composed of one or more LED <i>modules</i>, containing other elements such as electrical, mechanical, thermal or optical components. They are distinguished from light-emitting diode (LED) modules by their base designed to be easily installed or replaced in a luminaire, and to allow electrical contact and mechanical fastening".</p> <p>The current Note 9 becomes Note 12.</p> <p><u>Current Note 9 a) (renumbered Note 12 a)).</u> New wording :</p> <p>"a) 1°) <i>Semiconductor devices</i>, devices whose operation is based on the variation of resistivity under the influence of an electric field or semiconductor transducers.</p> <p>Semiconductor devices can also include an assembly of several elements, even equipped with active devices. or liabilities whose function is auxiliary.</p>	<p><u>New Note 11.</u></p> <p>Insert the following new Note 11 :</p> <p>"11.- For the purposes of heading 85.39, the expression "light-emitting diode (LED) light sources" covers :</p> <p>(a) "Light-emitting diode (LED) modules" which are electrical light sources based on light-emitting diodes (LED) arranged in electrical circuits and containing further elements like electrical, mechanical, thermal or optical elements. They also contain discrete active elements, discrete passive elements, or articles of heading 85.36 or 85.42 for the purposes of providing power supply or power control. Light-emitting diode (LED) modules do not have a cap designed to allow easy installation or replacement in a luminaire and ensure mechanical and electrical contact.</p> <p>(b) "Light-emitting diode (LED) lamps" which are electrical light sources containing one or more LED modules containing further elements like electrical, mechanical, thermal or optical elements. The distinction between light-emitting diode (LED) modules and light- emitting diode (LED) lamps is that lamps have a cap designed to allow easy installation or replacement in a luminaire and ensure mechanical and electrical contact."</p> <p>Renumber present Note 9 as Note 12. <u>Present Note 9</u></p> <p><u>(a) (renumbered Note 12 (a)).</u> Delete and substitute :</p> <p>"(a) (i) "Semiconductor devices" are semiconductor devices the operation of which depends on variations in resistivity on the application of an electric field or semiconductor-based transducers.</p> <p>Semiconductor devices may also include assembly of plural elements, whether or not equipped with active and passive device ancillary functions.</p>

FRANCAIS	ENGLISH
<p><i>Semiconductor transducers</i>, for the purposes of this definition, are semiconductor sensors, semiconductor actuators, semiconductor resonators and semiconductor oscillators, which are types of discrete semiconductor devices, which perform an intrinsic function, which can convert any type of physical or chemical phenomenon or action into an electrical signal or convert an electrical signal into any type of physical phenomenon or action.</p> <p>All the elements making up a transducer are practically inseparably joined together, and may also include inseparable materials required for the construction or operation of a semiconductor device.</p> <p>For the purposes of this definition :</p> <ol style="list-style-type: none"> 1) <i>Semiconductor</i> means constructed or manufactured on a semiconductor substrate or consisting of semiconductor-based materials, manufactured using semiconductor technology, in which the semiconductor substrate or material plays a critical and irreplaceable role in the function and performance of the transducer, and whose operation is based on semiconductor physical, electrical, chemical and optical properties. 2) <i>Physical or chemical phenomena</i> include pressure, sound waves, acceleration, vibration, movement, orientation, stress, magnetic field intensity, light, radioactivity, humidity, creep, chemical concentration, etc. 3) <i>Semiconductor sensors</i> are a type of semi-conductor device consisting of microelectronic or mechanical structures created in the bulk or on the surface of a semiconductor, whose function is to detect physical or chemical quantities and convert them into electrical signals produced by the resulting variations in electrical properties or deformation of the mechanical structure. 4) <i>Semiconductor actuators</i> are a type of solid-state device. 	<p>"Semiconductor-based transducers" are, for the purposes of this definition, semiconductor-based sensors, semiconductor-based actuators, semiconductor-based resonators and semiconductor-based oscillators, which are types of discrete semiconductor-based devices, which perform an intrinsic function, which are able to convert any kind physical or chemical phenomena or an action into an electrical signal or an electrical signal into any type of physical phenomenon or an action.</p> <p>All the elements in semiconductor-based transducers are indivisibly combined, and may also include necessary materials indivisibly attached, that enable their construction or function.</p> <p>The following expressions mean :</p> <ol style="list-style-type: none"> (1) "Semiconductor-based" means built or manufactured on a semiconductor substrate or made of semiconductor materials, manufactured by semiconductor technology, in which the semiconductor substrate or material plays a critical and unreplaceable role of transducer function and performance, and the operation of which is based on semiconductor properties including physical, electrical, chemical and optical properties. (2) "Physical or chemical phenomena" relate to phenomena, such as pressure, acoustic waves, acceleration, vibration, movement, orientation, strain, magnetic field strength, electric field strength, light, radioactivity, humidity, flow, chemicals concentration, etc. (3) "Semiconductor-based sensor" is a type of semiconductor device, which consists of microelectronic or mechanical structures that are created in the mass or on the surface of a semiconductor and that have the function of detecting physical or chemical quantities and converting these into electric signals caused by resulting variations in electric properties or displacement of a mechanical structure. (4) "Semiconductor-based actuator" is a type of semiconductor device, which consists of microelectronic or mechanical structures that are created in the mass or on the surface of a semiconductor and that have the function of converting electric signals into physical movement.

FRANCAIS	ENGLISH
<p>These are microelectronic and mechanical structures created in the bulk or on the surface a semiconductor, whose function is to convert electrical signals into physical motion.</p> <p>5) <i>Semiconductor resonators</i> are a type of semiconductor device consisting of microelectronic and mechanical structures that are created in the bulk or on the surface of a semiconductor and whose function is to generate a mechanical or electrical oscillation of a predefined frequency that depends the physical geometry of these structures in response to an external electrical signal.</p> <p>6) <i>Semiconductor oscillators</i> are a type of semiconductor device consisting of microelectronic or mechanical structures that are created in the bulk or on the surface a semiconductor and whose function is to generate a mechanical or electrical oscillation of a predefined frequency that depends the physical geometry of these structures.</p> <p>2°) <i>Light-emitting diodes (LEDs)</i> are semi-conductor devices made from semiconductor materials, which convert electrical energy into visible, infrared or ultraviolet radiation, even when electrically connected to each other and even when combined with protective diodes. <i>Light-emitting diodes (LEDs)</i> of heading 85.41 do not contain any elements intended to supply power or to control power.</p> <p><u>Current Note 9 b) 4°) 3. a) (renumbered Note 12 b) 4°) 3. a)).</u> New wording :</p> <p>"3. a) <i>Silicon sensors</i> are microelectronic or mechanical structures created in the mass or on the surface of a semiconductor, whose function is to detect physical or chemical phenomena and convert them into electrical signals when variations in electrical properties or deformation of the mechanical structure occur. <i>Physical or chemical phenomena</i> include phenomena such as such as pressure, sound waves, acceleration, vibration, the</p>	<p>(5) "Semiconductor-based resonator" is a type of semiconductor device, which consists of microelectronic or mechanical structures that are created in the mass or on the surface of a semiconductor and that have the function of generating a mechanical or electrical oscillation of a predefined frequency that depends on the physical geometry of these structures in response to an external input.</p> <p>(6) "Semiconductor-based oscillator" is a type of semiconductor device, which consists of microelectronic or mechanical structures that are created in the mass or on the surface of a semiconductor and that have the function of generating a mechanical or electrical oscillation of a predefined frequency that depends on the physical geometry of these structures.</p> <p>(ii) "Light-emitting diodes (LED)" are semiconductor devices based on semiconductor materials which convert electrical energy into visible, infra-red or ultra-violet rays, whether or not electrically connected among each other and whether or not combined with protective diodes. Light-emitting diodes (LED) of heading 85.41 do not incorporate elements for the purposes of providing power supply or power control;".</p> <p><u>Present Note 9 (b) (iv) 3. Paragraphs p) to w) become paragraphs q) to x) respectively.	Reletter present items (p) to (w) as (q) to (x), respectively.
<p><u>New Note 6.</u></p> <p>Insert the following new Note 6:</p> <p>"6. - Within the meaning of n° 95.08 :</p> <p>a) <i>amusement park ride</i> means a device or combination of devices for transporting, conveying or directing one or more persons along agreed or restricted routes, including water routes, or within a defined area, primarily the purpose of recreation or amusement. These rides may be part of an amusement park, theme park, water park or fair. Amusement park rides do not include equipment of the type usually installed in residences or on playgrounds;</p> <p>b) The term "<i>water park attraction</i>" refers to a device or combination of devices placed in a defined area involving water, without a set course. Water park attractions include only equipment specially designed for use in water parks;</p> <p>c) <i>Fairground attractions</i> are games of chance, strength or skill that generally require the presence of an operator or supervisor and may be installed in permanent buildings or in independent concession stands. Fairground attractions do not include equipment of heading 95.04.</p> <p>This heading does not cover equipment classified more specifically elsewhere in the Nomenclature.</p>	<p><u>New Note 6.</u></p> <p>Insert the following new Note 6 :</p> <p>"6.- For the purposes of heading 95.08 :</p> <p>(a) The expression "amusement park rides" means a device or combination of devices or equipment that carry, convey, or direct a person or persons over or through a fixed or restricted course, including watercourses, or within a defined area for the primary purposes of amusement or entertainment. Such rides may be combined within an amusement park, theme park, water park or fairground. These amusement park rides do not include equipment of a kind commonly installed in residences or playgrounds;</p> <p>(b) The expression "water park amusements" means a device or combination of devices or equipment that are characterized by a defined area involving water, with no purposes built path. Water park amusements only include equipment designed specifically for water parks; and</p> <p>(c) The expression "fairground amusements" means games of chance, strength or skill, which commonly employ an operator or attendant and may be installed in permanent buildings or independent concession stalls. Fairground amusements do not include equipment of heading 95.04.</p> <p>This heading does not include equipment more specifically classified elsewhere in the Nomenclature."</p>
